The sequence contained an oligo-dT track that was present in the oligoucleotide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the NotI site and the oligo-dT track served to identify it as a clone from the normalized hippocampus library cDNA Library Preparation: M.B.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      /lab_host="Organ: Femur and Tibla; Vector: pT7T3D-Pac /note="Organ: Femur and Tibla; Vector: pT7T3D-Pac /note="Organ: Femur and Tibla; Vector: pT7T3D-Pac /forte="Organ: Femur and Tibla; Vector: pT7T3D-Pac /site_2: Eco RI: UI-R-DY1 is a normalized cDNA library containing the following tissue(s): Rat Cartilage from Femur and Tibla. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site, Double stranded
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonucleotide used to prime the synthesis of Itst-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is CTAATGGACG. The Rat cartilage tissue was provided by Dr Jeff Stevens at the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Email: msoares@blue.weeg.uiowa.edu
The sequence contained an oligo-dT track that was present in the oligonucleotide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the NotI site and the oligo-dT track served to verify it as a clone from the normalized cartilage library cDNA Library Preparation: M.B. Soares Lab Clone distribution: clones will be available through Research Genetics (www.resgen.com)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Eukaryota; Métazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

The sequence tag present in the cDNA between the NotI site and the oligo-dT track served to verify it as a clone from the normalized cartilaginous tumor library cDNA Library Preparation: M.B. Soares Lab Clone distribution: clones will be available through Research Genetics (www.resgen.com)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           οy
                                                                                                                                                                                                                                                                                following tissue(s): Swarm Rat Chondrosarcoma. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT773-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is CATTCTTGTPA. The Rat cartilaginous tumor tissue was provided by Dr Jeff Stevens at the University of Iowa.

Single pass sequencing. Bases called and alt_trimmed with phred
v0.9809044.e. Vector identified by cross_match with the -minscore 18
and -minmatch 12 options.
                                                                                                                                                                                                                                                                                                                                                                                                                                                              EST 17-APR-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Fahrenkrug, S.C., Freking, B.A., Rohrer, G.A., Smith, T.P.L., Casas, E. It is a mammallan homologue of the cytokine designated CTLA-8 (also referred to as IL-17). The specification also describes homologues IL-171, IL-172, IL-173, IL-174, IL-176, and IL-177. The DNA sequence encoding IL-171 is useful for identifying genes, mRNA and cDNA molecules which code for related or homologues proteins. The IL-171 protein, antibodies against IL-171, and compounds which have binding affinity to IL-171 are useful in treatment of conditions associated with abnormal physiology or development, including abnormal

A human interleukin-174 polypeptide.

(first entry)

07-NOV-2000

AAB07692;

```
The polypeptide is an IL-17-like (CTLA-8 related) protein. It is a member of a new group of interleukins, IL-170, and IL-171. The members comprise IL-172, IL-173, IL-174, and IL-171. IL-170 protein can be used to treat abnormal proliferation e.g. cancer or degenerative conditions. Antibodies can be used in diagnostic methods to detect over production of II-170 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          polynucleotide encoding a mammalian Interleukin-17 like to identify genes for homologous proteins -

It is a mammalian homologue of the cytokine designated CTLA-8 (also referred to as IL-17). The specification also describes homologues IL-171, IL-175, IL-172, IL-173, IL-174, IL-170, and IL-177. The DNA sequence encoding IL-171 is useful for identifying genes, makA and CDNA molecules which code for related or homologous proteins. The binding affinity to IL-171 are useful in treatment of compounds which have binding affinity to IL-171 are useful in treatment of conditions associated with abnormal physiology or development, including abnormal proliferation, e.g. cancerous conditions, or degenerative conditions. The IL-171 protein can be used in kits and assay methods for identifying compounds that selectively bind to IL-171.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  cytostatic; multiple sclerosis; rheumatoid arthritis; therapy; lupus; inflammatory bowel disease; neuronal dysfunction; transplant rejection; autoimmune disorder; lung; skin; kidney; bone; eye; vascular system; infection, hepatitis; obesity; anorexia; cachexia; glomerulonephritis; cystic fibrosis; Alzhehmer's disease; Parkinson's disease; emplysema; eczema; sepsis; psoriasis; wound healing; osteoporosis; paget's disease; epilepsy; atherosclerosis; heart failure; angiogenesis; endometriosis;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to nucleic acid molecules encoding Interleukin 17 (IL-17)-like polypeptides. IL-17 DNA can be used to modulate the levels of IL-17 protein is useful for treating, preventing or ameliorating a disease, such as immune system dysfunction (rheumatoid arthritis, osteoarthritis, inflammatory joint disease); autoimmune (multiple sclerosis, lupus, diabetes, inflammatory bowel disease, transplant rejection, graft vs. host disease); Infections (HIV, hepatitis, bacterial); weight disorders (obesity, anorexia, cachexia, sepsis); neuronal dysfunction (Alzheimer's, Parkinson's disease); lung
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    nflammation. The present sequence is human Interleukin-17 like (IL-17L)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              61 SEDGPLNSRAISPWRYELDRDLNRLPQDLYHARCLCPHCVSLQTGSHMDPRGNSELLYHN 120

IL-171 protein, antibodies against IL-171, and compounds which have binding affinity to IL-171 are useful in treatment of conditions associated with abnormal physiology or development, including abnormal proliferation, e.g. cancerous conditions, or degenerative conditions. The IL-171 protein can be used in kits and assay methods for identifying

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence encodes an interleukin (IL)-174 polypeptide. It is a mammalian homologue of the cytokine designated CTLA-8 (also referred to as IL-17). The specification also describes homologues IL-171, IL-175, IL-173, IL-174, IL-176, and IL-177. The DNA sequence encoding IL-171 is useful for identifying genes, mRNA and CDNA molecules which code for related or homologous proteins. The

                                                                                                                               ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The polypeptide is an IL-17-like (CTLA-8 related) protein. It is a member of a new group of interleukins, IL-170 polypeptides. The members comprise IL-172, IL-173, IL-174, IL-176, IL-177, and IL-171. IL-170 protein can be used to treat abnormal proliferation e.g. cancer or degenerative conditions. Antibodies can be used in diagnostic methods to detect over production of IL-170 protein in cells or body
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          GlnThrValPheTyrArgArgProCysHisGlyGluLysGlyThrHisLysGlyTyrCys 140

mammal by the administration of an agonist or antagonist of the cytokine interleukin 174 (IL-174). Administration of an IL-174 agonist directs the immune response towards a Th2 response, stimulates an innate immune response, augments the inflammatory response from epithelial or fibroblast cells, induces gut cell growth, promotes extramedullary haematopoiesis, or augments an antibody response in serum and faecal material, while administration of an IL-174 antagonist directs the immune response away from a Th2 type response, and prevents inflammation or granuloma formation. IL-174 agonists may be used to treat autoimmune conditions (particularly multiple sclerosis, systemic lupus
